

## A promising career in retail industrial engineering beckons

Logile is seeking entry level Industrial Engineering graduates to fill Industrial Engineering Analyst roles within its Retail Services business unit.

Retail Services partners with clients of a wide variety to improve operational effectiveness within stores and supply chain. This includes optimizing labor spend while improving customer and employee experience.

Industrial Engineering Analysts support client delivery engagements focused on improving operational efficiency and implementing workforce management software. The position reports directly to the Director of Industrial Engineering Services. While assigned to project roles Industrial Engineering Analysts collaborate closely with other teams in Retail Services.

## Description of the Work

Industrial Engineering Analysts fill roles on a wide variety of project engagements including but not limited to:

- Data collection and analysis
- 5-S workplace organization implementation
- Best methods analysis and implementation
- Engineered labor standards review and development
- Change management design and implementation
- Training

- Execution of project plan and timeline
- Expense reporting
- Risk mitigation
- Client relationship management

Industrial Engineering Analysts are also asked to contribute to Logile's company growth in a variety of areas including but not limited to:

- Internal training development
- Marketing and business development support
- Peer coaching and development

Areas of responsibility include but are not limited to:

- Managing day-to-day work assignments
- Supporting project deliverables
- Implementation of Logile methodology for operational improvement

## Job Requirements

- B.S. in Industrial Engineering
- Relevant internship experience is preferred
- Demonstrated leadership ability
- Proficiency in process improvement, opportunity analysis, and work measurement
- Proficiency with MS Office Tools (Excel, Word, PowerPoint, Project)
- Exceptional interpersonal and presentation skills
- Travel will occur as needed and is expected to be up to 80% of the Industrial Engineering Analyst's time. When travel is not required the working location will be from home, provided there is reliable internet connectivity.

Industrial Engineers may advance to Industrial Engineer roles or may be considered for positions within other Retail Services operating groups.

## About the company

**PROCESS** SIMPLIFIED

Logile, Inc. provides workforce management and execution compliance solutions, encompassing both best practices consulting and planning and execution software applications, that enable companies to maximize efficiency, customer service and profitability.

Logile's team of retail industrial engineers utilize the 5-S methodology to organize the workplace, establish preferred work methods, and tailor Logile's extensive library of industry typical engineered labor standards to the customer's workplace. They then operationalize these practices using Logile's workforce and execution management software suite that includes labor standards development and modeling, sales and labor budgeting, sales and item level forecasting, employee self-service, optimized wall-to-wall employee scheduling, time and attendance, dynamic reforecasting, task and communication management, and enterprise performance reporting. Logile's flexible solutions integrate with existing systems, are multi-lingual and compatible with all major mobile devices. They can be deployed as a full-service turnkey hosted solution (SaaS). Customers can be selective about which Logile services and software are appropriate to meet their objectives and timelines.

Logile, Inc. is privately held with its headquarters and core software development in Dallas, Texas. Principal hosting and disaster recovery are provided through the most secured facilities of Amazon Web Services in Virginia and Oregon. Retail industrial engineers and business analysts are located nationwide and in Latin America. Additional development teams are in China and India.
